Amendments to the Specification:

Please amend the Specification as follows:

Please amend all references to "Figure 9" to -- Figures 9A &9B -- as follows

At page 14 of the specification, use these replacement paragraphs, in accordance with 37 CFR 1.121(b).

FIGURES 9A & 9B is agree black and white photographs of laminin digested with elastase, separated by SDS-PAGE and following interaction with biotinylated AB (1-40). A ~55 kilodalton laminin fragment (arrow) that binds biotinylated AB was identified and sequenced. Note also the presence of a ~130 kDa fragment (arrowheads) that binds AB following 1.5 hours of elastase digestion (lane 2). Panel AFigure 9A is a ligand blot using biotinylated AB as a probe, whereas panel BFigure 9B is Coomassie blue staining of the same blot in Panel AFigure 9A to locate the specific band(s) for sequencing.

FIGURE 10 shows the complete amino acid sequence of the mouse laminin A chain. Sequencing of the ~55 kilodalton Aß-binding band shown in Figure 9Figures 9A & 9B leads to the identification of an 11 amino acid segment (underline and arrowhead) within the laminin A chain. This Aß binding region of laminin is situated within the globular domain repeats of the laminin A chain.

MC Pages 40-

At page 41 of the specification (Example 6), use these replacement paragraphs, in accordance with 37 CFR 1.121(b).

In Figure 9, Panel AFigure 9A represents an Aß ligand blot whereas panel BFigure 9B represents the equivalent Coomassie blue stained blot. As shown in Figure 9, Panel AFigure 9A (lanes 2 and 3), elastase-digested laminin produced multiple protein fragments which bound biotinylated Aß (1-40). Panel AFigure 9A, lane 1 represents undigested mouse EHS laminin, whereas lanes 2 and 3 represents laminin which had been digested with elastase for 1.5 hours or
